Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, drawn to an automated retail store having goods, classified in class 700, subclass 231.
- II. Claims 5,6, drawn to method of purchasing, classified in class 705, subclass 26.
- III. Claims 7,8, drawn to software with trusted agent controls, classified in class 717, subclass 100.

The inventions are distinct, each from the other because:

Inventions I and II,III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a food distribution station for the poor. See MPEP § 806.05(d).

Inventions II and I,III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as use as an automated teller station. See MPEP § 806.05(d).

Inventions III and I,II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as a trusted agent for on-line purchase of digital data. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
